EDUCATION

BSc, Software Engineering

Makerere University
Graduation Expected Jan 2027 |
CGPA 4.00

CORE SKILLS

Project Management

- Agile/Scrum delivery
- Stakeholder management
- Risk & issue tracking
- Backlog management

Requirements & Analysis

- Requirements gathering
- Use cases & user stories
- Solution architecture

Quality Assurance

- Test planning & UAT
- Defect identification

Software Testing

- Functional & Regression Testing

PROFESSIONAL SUMMARY

Project Manager and Software Quality Assurance professional with experience managing software delivery across the full SDLC and currently serving as Head of the Software Testing Life Cycle (STLC). Experienced in business requirements review, requirements analysis, test planning, functional testing, User Acceptance Testing (UAT), test case development and execution, defect management, validation of fixes, and release readiness. Strong Software Engineering background with hands-on exposure to test automation, including Selenium and Playwright. Experienced in coordinating cross-functional teams, translating business requirements into testable specifications, managing stakeholders, and supporting software quality throughout development and post-deployment.

PROFESSIONAL EXPERIENCE

Project Manager | Pahappa Limited *May 2025 – Present* | Kampala, Uganda

- Manage and coordinate the delivery of four concurrent software products across the full Software Development Life Cycle (SDLC) : KPI Tracker, Pahappa HR, Pahappa HR Mobile Application(Android, iOS), and Expense Management System while serving as Head of the Software Testing Life Cycle (STLC), overseeing QA activities, test planning, execution, defect management, UAT, and release readiness.
- Lead business requirements reviews and business-process analysis, translating stakeholder needs into functional and system requirements, user stories, use cases, and acceptance criteria that provide a basis for development and testing.
- Develop and execute functional test cases and UAT scenarios, ensuring test coverage aligns with approved business requirements and acceptance criteria.

- User Acceptance Testing (UAT)
- Test Planning & Strategy
- Test Case Design & Execution
- Defect Management
- Requirements Traceability
- Release Readiness
- Post-Deployment Validation

Test Automation

- Selenium
- Playwright
- Automated Test Scripts

TECHNICAL

- JavaScript / TypeScript
- MySQL, PostgreSQL
- React, Next.js
- Flask

TOOLS

- Jira, Click Up
- Figma
- Git/GitHub, GitLab
- Postman
- Selenium, Playwright

LANGUAGES

- English
- Luganda
- Runyankole
- Kinyarwanda

- Coordinate defect identification, documentation, prioritization, retesting, and validation of fixes while working closely with developers and stakeholders to resolve software quality issues.
- Plan and coordinate testing activities across multiple products, managing testing priorities, schedules, dependencies, risks, and release readiness in line with project delivery timelines.
- Guide developers by clarifying requirements, investigating reported defects, resolving blockers, and reviewing proposed solutions against approved specifications.
- Coordinate client onboarding, product demonstrations, UAT and feedback sessions, post-deployment validation, and ongoing quality reviews while maintaining requirements, test-case, defect, and project documentation.

Freelance Software Tester *Tikulema Solutions*

April - June 2024 | Trilz Media Company Ltd

- Conducted functional and usability testing of a pre-launch e-commerce website, identifying defects and usability issues before production release.
- Developed and executed test scenarios across key website workflows and documented defects for resolution.
- Validated implemented fixes and supported final quality checks before release.

SELECTED PROJECTS

Kebulan Business Management System | *Typescript* | *NextJS* | *PostgreSQL*

A multi-tenant POS and business-management platform for Ugandan SMEs, covering point of sale, inventory, customer tracking, staff access, and reporting, plus a super-admin control centre for platform-wide operations across tenants.

Pharmalink | *React(Frontend)* | *Django(Backend)*

A web app connecting Ugandan pharmacies with customers: pharmacies post available medicine stock, and customers search live listings to find and compare availability across nearby pharmacies.
